

أنماط القيادة في الوحدات التدريبية في المملكة العربية السعودية

Leadership Styles at Training Units in Saudi Arabia

Abstract:

The study aimed at identifying leadership styles in Technical Colleges and Industrial Institutes. The study relied on the descriptive approach. A (34 items) questionnaire was developed with adequate validity and reliability, which was distributed to a sample of (394) trainers and administrative staff at technical colleges and Industrial Institutes, by end of the school year 2015/2016. The results showed that the most practiced administrative pattern was "the unsteady pattern, then "the social pattern", and the least was "the negative pattern". There are no statistically significant differences among the means of the sample according to study variables.
