## **Program Description**

This program of Geometrics Surveying is designed so as to meet the training needs of the local labor market, following professional International standards set for Surveying Engineering Technology.

Training in this program includes general skills in English, physics, statistical methods, mathematics and professional ethics, methods of human communication, interaction skills, project management, Quality management and leadership.

It also includes training on computer programing as well as specialized skills in the field of Geometrics, such as: Geodesy, theory of errors and adjustment, map projections and making, advance topics in GIS, spatial databases, mine surveying, hydrographic surveying, and surveying applications by computer software, remote sensing and digital photogrammetry.

In this training program the trainees spend (1616) training hours in college.

The graduates of this program will be given a bachelor degree in “Surveying”. Graduates of this program must demonstrate:

- 1- The ability to analyze, design, and implement surveying projects, GIS data, and remote sensing applications .
- 2- The ability to apply project management techniques to surveying projects.
- 3- The ability to utilize statistics/probability, transforms methods, discrete mathematics, or applied differential equations in handling with surveying process.

The Theoretical and Practical Tests and Graduation Projects Determine Learning Outcomes and Trainee Levels for each program.

The training courses contain a theoretical part and a practical part. The practical part is tested as a practical test and the theoretical part is a theoretical test with different evaluation methods

The Bachelor Degree Graduate gets the seventh level in the Saudi Arabian Qualifications Framework (SAQF).

Admission Requirements: The applicant must have a diploma in Surveying.

## Study Plan

Sixth Semester								
No.	Course Code	Course Name	Pre. req	No. of Units				
				CRH	L	P	T	CTH
1	MATH 301	Mathematics (1)		3	2	2	0	4
2	PHYS 301	Physics		3	2	2	0	4
3	ENGL 301	English Language (1)		3	3	0	1	4
4	ICMT 402	Computer Programming		3	2	2	0	4
5	SSRV 311	Geodesy		3	2	2	0	4
Total				15	11	8	1	20
CRH:Credit Hours      L:Lecture      P:Practical      T:Tutorial      CTH:Contact Hours								

Seventh Semester								
No.	Course Code	Course Name	Pre. req	No. of Units				
				CRH	L	P	T	CTH
1	STAT 303	Statistics and Probability		3	3	0	1	4
2	MATH 302	Mathematics (2)	MATH301	3	2	2	0	4
3	ENGL302	English Language (2)	ENGL301	3	3	0	1	4
4	SSRV 352	Digital Image Processing		3	2	2	0	4
5	SSRV 321	Map Making & Projections		2	2	0	0	2
6	SSRV 432	Computer Survey Applications		2	0	4	0	4
Total				16	12	8	2	22
CRH:Credit Hours      L:Lecture      P:Practical      T:Tutorial      CTH:Contact Hours								

Eighth Semester								
No.	Course Code	Course Name	Pre. req	No. of Units				
				CRH	L	P	T	CTH
1	SSRV 443	Spatial Databases		3	2	2	0	4
2	SSRV 472	Theory of Errors & Observation Adjustment	STAT303	2	2	0	2	4
3	SSRV 462	Indoor Positioning Technology		3	2	2	0	4
4	SSRV 433	Point Cloud Science		3	2	2	0	4
5	SSRV 361	Remote Sensing	SSRV 352	3	2	2	0	4
Total				14	10	8	2	20
CRH:Credit Hours      L:Lecture      P:Practical      T:Tutorial      CTH:Contact Hours								

Ninth Semester								
No.	Course Code	Course Name	Pre. req	No. of Units				
				CRH	L	P	T	CTH
1	SSRV 341	Geographic Information Analysis	STAT 303	3	2	2	0	4
2	GNRL 402	Engineering Project Management		3	3	0	0	3
3	CCIV 461	Highway Engineering		3	2	2	0	4
4	SSRV 490	Project (1)		2	0	4	0	4
5	SSRV	Elective (1)		3	2	2	0	4
Total				14	9	10	0	19
CRH:Credit Hours      L:Lecture      P:Practical      T:Tutorial      CTH:Contact Hours								

Tenth Semester								
No.	Course Code	Course Name	Pre. req	No. of Units				
				CRH	L	P	T	CTH
1	SSRV 421	Distributed Geographic Information Systems		3	2	2	0	4
2	SSRV 451	Digital Photogrammetry	SSRV 352	3	2	2	0	4
3	SSRV 453	Hydrographic Surveying		3	2	2	0	4
4	SSRV492	Project(2)	SSRV 490	2	0	4	0	4
5	SSRV	Elective (2)		3	2	2	0	4
Total				14	8	12	0	20
CRH:Credit Hours      L:Lecture      P:Practical      T:Tutorial      CTH:Contact Hours								

Total Number of Semesters Credit Units	CRH	L	P	T	CTH
	73	50	46	5	101
Total of training Hours 16 * 101		1616			

## Elective Courses

Elective courses(1)								
No.	Course Code	Course Name	Pre. req	No. of Units				
				CRH	L	P	T	CTH
1	SSRV 434	Web Technology		3	2	2	0	4
2	SSRV 481	Disaster Management		3	2	2	0	4
3	SSRV 454	Underground Surveying		3	2	2	0	4
CRH:Credit Hours      L:Lecture      P:Practical      T:Tutorial      CTH:Contact Hours								

Elective courses(2)								
No.	Course Code	Course Name	Pre. req	No. of Units				
				CRH	L	P	T	CTH
1	SSRV 482	Land Law and Registration		3	2	2	0	4
2	SSRV 455	Advanced Photogrammetry		3	2	2	0	4
3	SSRV422	Coordinate Transformations		3	2	2	0	4
CRH:Credit Hours      L:Lecture      P:Practical      T:Tutorial      CTH:Contact Hours								

## Brief Description

Course Name	Geodesy	Course Code	SSRV 311	Credit Hours	3
Description	This course is designed in order to provide students with knowledge and skills of applying principles, instrumentation, data analysis methods, and visualization products associated with the science of geodesy which is concerned with the study of the shape and size of the earth in the geometric sense as well as with the form of the equipotential surfaces of the gravity potential.				

Course Name	Map Making & Projections	Course Code	SSRV 321	Credit Hours	2
Description	The Map Making course is designed since it is the art, science and engineering of map making, and it has been one of the fundamental components in the geospatial technology. This course provides in-depth discussions on the cartographic theories, principles and process of designing and making maps for visualizing spatial information. It will introduce how to practically make different kinds of maps by integrating theoretical understanding with mapping practice using latest version of ArcGIS software. All major thematic maps will be studied in the classroom and practiced in the computer lab. In addition, every student will be expected to do a mapping project as the final class project.				

Course Name	Geographic Information Analysis	Course Code	SSRV 341	Credit Hours	3
Description	This course covers techniques for the statistical analysis of spatial data. The course covers issues in characterizing spatial data, methods and problems in spatial data sampling, techniques for visualizing, exploring and modeling spatial data.				

Course Name	Hydrographic Surveying	Course Code	SSRV453	Credit Hours	3
Description	This course is designed in order to provide students with knowledge and skills of Hydrographic Surveying witch focus on measurement of the depth and bottom configuration of water bodies and the features which affect maritime navigation. At the end of the course, the students will be able to ( 1) gain adequate insight into theoretical aspects of hydrographic surveying (2) use the data to update nautical charts and develop hydrographic models; increasingly, the hydrographic data is used for multiple purposes, through the Integrated Ocean and Coast Mapping program.				

Course Name	Spatial Databases	Course Code	SSRV 443	Credit Hours	3
Description	This course covers basic concepts of a Spatial Database, including understanding what schemas and views are. Topics will cover also spatial data modeling, query language indexes and access methods.				

Course Name	Remote Sensing	Course Code	SSRV 361	Credit Hours	3
Description	The course aims to cover the fundamental physical and technical concepts and applications of remote sensing for the Environment. The course will have a lecture/labs format with emphasis on interpretation of satellite data.				

Course Name	Digital Photogrammetry	Course Code	SSRV 451	Credit Hours	3
Description	<p>This Course is the second part of photogrammetry topics. This course aims at providing trainee with essential and basic skills to deal with digital aerial photographs, and digital photogrammetry systems for drawing digital survey maps form digital aerial stereographs, and forming digital terrain models (DTMs).</p> <p>In this course, trainee practices and operates digital photogrammetry computer software and will use it to perform different photogrammetry operations which includes; inner orientation, relative orientation, absolute orientation, aerial triangulation, establish digital survey maps, and form digital terrain models.</p>				

Course Name	Computer Survey Applications	Course Code	SSRV 432	Credit Hours	2
Description	This course aims at providing trainee chance to practice and gain more skills through performing some projects using computer programs to draw cadastral and contour maps and print them with different scales. Also use computer programs to construct longitudinal and cross section from contour map and extract the cut and fill volumes. Also use computer programs to level piece of compute quantities considering designed level is horizontal and with certain slope.				

Course Name	Highway Engineering	Course Code	SSRV 461	Credit Hours	3
Description	The course is presented in two strands. The first strand is concerned with the fundamentals of highway and pavement engineering. It introduces the design process of roads and intersections, including horizontal and vertical alignment design, cross-sections and earthworks. The second half of this strand deals with pavement design and evaluation. Topics include pavement composition, pavement materials, asphalt mix design, the pavement thickness design, and defects in Flexible pavements and failures in rigid pavements. The second strand is presents briefly bridges classification and construction methods.				

Course Name	Theory of Errors & Observation Adjustment	Course Code	CSRV 472	Credit Hours	2
Description	This course is designed for the purpose of examining the nature of measurements, statistical analysis of random errors in measurements, propagation of errors, survey standards and design specifications, development of coordinate geometry and trigonometric solutions of plane surveying problems, analysis of errors and mistakes in indirect measurement.				

<b>Course Name</b>	<b>Distributed Geographic Information Systems</b>	<b>Course Code</b>	<b>SSRV 421</b>	<b>Credit Hours</b>	<b>3</b>
<b>Description</b>	This course will describe new services, which become widely distributed through world today such as Distributed GIS, Web Mapping, and Location Based Services.				

<b>Course Name</b>	<b>Digital Photogrammetry</b>	<b>Course Code</b>	<b>SSRV 451</b>	<b>Credit Hours</b>	<b>3</b>
<b>Description</b>	The course will be designed to address remote digital image acquisition systems, format of digital data, image processing for radiometric and geometric corrections, geo-referencing and registration, image enhancement techniques (including PCT and FT), image classification techniques, data merging and accuracy assessment.				

<b>Course Name</b>	<b>Indoor Positioning Technology</b>	<b>Course Code</b>	<b>SSRV462</b>	<b>Credit Hours</b>	<b>3</b>
<b>Description</b>	Indoor Positioning Technologies can be used to locate people or objects inside buildings, typically via a mobile device such as a smart phone or tablet. . It helps people in finding their targets. With indoor positioning, we are able to guide our visitors exactly to the item they are looking for				

<b>Course Name</b>	<b>Point Cloud Science</b>	<b>Course Code</b>	<b>SSRV433</b>	<b>Credit Hours</b>	<b>3</b>
<b>Description</b>	This advanced course will familiarize students with the various data collection technologies used in the generation of 3D point cloud data, and their associated sources of error. This course is aimed at collectors and users of 3D point cloud data so that informed decisions can be made regarding the appropriateness of the various data collection and processing options, and deliverables, and so that the issues around data management are appreciated.				

<b>Course Name</b>	<b>Web Technology (Elective course-1)</b>	<b>Course Code</b>	<b>SSRV434</b>	<b>Credit Hours</b>	<b>3</b>
<b>Description</b>	This course is designed to offer an overview of the modern Web technologies used for the Web development. The purpose of this course is to give students the basic understanding of how things work in the Web world from the technology point of view as well as to give the basic overview of the different technologies that can be used to develop Web-based Application.				

Course Name	Disaster Management (Elective course-1)	Course Code	SSRV481	Credit Hours	3
Description	This course is a unique program which will provide a balanced study of environmental hazards and disaster management, pre-event mitigation, disaster risk reduction and disaster relief, along with the development of technical and interpersonal skills. Topics of discussion include the knowledge of Principles and Concepts in Disasters, Management of Coastal and Hydrological Hazards, Management of Geological and Technological Hazards, Personal Preparedness for Disasters, Professional Development for Disasters.				

Course Name	Underground Surveying (Elective course-1)	Course Code	SSRV454	Credit Hours	3
Description	This course is designed in order to provide students with knowledge and skills of Underground Surveying which represent an important surveying activity and which is different from surveying in the sunlight. Students will be able to applying principles, instrumentation, data analysis methods, and visualization products associated with underground surveying. At the end of the course, the students will be able to gain adequate insight into theoretical aspects of underground surveying.				

Course Name	Advanced Photogrammetry (Elective course-2)	Course Code	SSRV455	Credit Hours	3
Description	This course will allow students carry out photo coordinates measurement and refinement, derive collinearity and coplanarity equations using collinearity and coplanarity conditions, respectively and apply these equations in forming analytical relative orientation, absolute orientation and aerial triangulation models and use of both terrestrial and unmanned aerial photographs to produce geometric survey data. Developing computer programs will be a task for some of these applications.				

Course Name	Land Law and Registration (Elective course-2)	Course Code	SSRV482	Credit Hours	3
Description	The course will give students broad background about various registration systems used worldwide with emphasis on that adopted in KSA, survey laws and legal principles related to transfer and endorsing real estate ownership in KSA using deeds and plans, professional ethics and role of surveyors.				

Course Name	Coordinate Transformations (Elective course-2)	Course Code	SSRV422	Credit Hours	3
Description	This course is designed to offer an overview of coordinate reference systems which are based on the definition of a datum, and which links the chosen coordinate system with the real world. Many datums are commonly used for referencing geospatial position. Students in the field of geospatial engineering must possess the knowledge, skills and competence in selecting, implementing and evaluating the transformation of coordinates <u>between geodetic datums</u> .				

Course Name	Project (1)	Course Code	SSRV 490	Credit Hours	
Description	<p>This course is the first part of applied project. Trainee gets the chance to get knowledge about executable projects within capacity of trainee. In addition, Trainee reviews some maps and reports of already executed projects.</p> <p>Trainee should select a project in coordination with his supervisor. The selected project should meet some standards such as: allows trainee to apply what he already has of skills and experiences during his study. In addition, Trainee should be able to use available supplies such as computer labs, survey systems and software, modern instruments to collect data, process and adjust data, compute final coordinates and draw maps at required scale.</p>				

Course Name	Project (2)	Course Code	SSRV 492	Credit Hours	
Description	<p>This course is the second part of applied project. Trainee gets the chance to practice using most advanced systems to execute projects. In addition, Trainee applies his experiences in carrying out some engineering and surveying projects.</p> <p>Trainee should select a project in coordination with his supervisor. The selected project should meet some standards such as: allows trainee to apply what he already has of skills and experiences during his study. In addition Trainee should be able to use available supplies such as computer labs, survey systems and software, modern instruments to collect data, process and adjust data, compute final coordinates and draw maps at required scale, compute volumes of cut and fill from contour maps an longitudinal and cross sections, also use available software of Remote sensing, and geographic information systems, digital photogrammetry.</p>				

## Courses Detail Description

Department	Civil & Architectural Technology	Major	Surveying Technology						
Course Name	Geodesy	Course Code	SSRV 311						
Prerequisites		Credit Hours CRH	3			CTH		4	
			L	2	P	2	T	0	
CRH: Credit Hours    L: Lecture    P: Practical    T: Tutorial    CTH: Contact Hours									
<b>Course description :</b> This course is designed in order to provide students with knowledge and skills of applying principles, instrumentation, data analysis methods, and visualization products associated with the science of geodesy which is concerned with the study of the shape and size of the earth in the geometric sense as well as with the form of the equipotential surfaces of the gravity potential.									
<b>Topics:</b> <ul style="list-style-type: none"><li>▪ Reductions And Computations For Plane Surveying Map Projections</li><li>▪ Geographic Coordinates And Reference Ellipsoids Height systems</li></ul>									

- Geodetic Coordinate Systems
- Distances, Angles and Point Positioning
- Map Projections
- Gravity, Geopotential, and The Geoid
- Height Systems and Vertical Datum's
- Tides
- Earth and its Deformation in Time
- Adjustment Of Level Nets

**Experiments:** if applicable it will support the course topics.

**References:**

### Course description :

This course is designed in order to provide students with knowledge and skills of Hydrographic Surveying with focus on measurement of the depth and bottom configuration of water bodies and the features which affect maritime navigation. At the end of the course, the students will be able to (1) gain adequate insight into theoretical aspects of hydrographic surveying (2) use the data to update nautical charts and develop hydrographic models; increasingly, the hydrographic data is used for multiple purposes, through the Integrated Ocean and Coast Mapping program.

### Topics:

- Concepts of Hydrographic Surveying
- Positioning methods and accuracy assessment
- Bathymetric survey systems
- Tidal theory
- Applications of hydrographic surveying

**Experiments:** if applicable it will support the course topics.

**Course description :**

The course aims to cover the fundamental physical and technical concepts and applications of remote sensing for the Environment. The course will have a lecture/labs format with emphasis on interpretation of satellite data.

**Topics:**

- Introduction to Remote Sensing
- Electromagnetic Radiation (EMR)
- Elements of Visual Image Interpretation
- Multispectral Remote Sensing Systems
- Thermal Remote Sensing
- Radar Remote Sensing
- Digital Image Processing – Part I: Basics
- Digital Image Processing – Part II: Image Classification
- In Situ Spectral Reflectance Measurement

**Experiments:** if applicable it will support the course topics.

**References:**

**Course description :**

This Course is the second part of photogrammetry topics. This course aims at providing trainee with essential and basic skills to deal with digital aerial photographs, and digital photogrammetry systems for drawing digital survey maps form digital aerial stereographs, and forming digital terrain models (DTMs).

In this course, trainee practices and operates digital photogrammetry computer software and will use it to perform different photogrammetry operations which includes; inner orientation, relative orientation, absolute orientation, aerial triangulation, establish digital survey maps, and form digital terrain models.

**Topics:**

- Introduction to Digital Photogrammetry
- Digital Photogrammetry System
- Ground Control for Aerial Photogrammetry
- Digital Photogrammetry Operations
- Aerotriangulation

**Experiments:** if applicable it will support the course topics.

**References:**

<b>Course description :</b> This course aims at providing trainee chance to practice and gain more skills through performing some projects using computer programs to draw cadastral and contour maps and print them with different scales. Also use computer programs to construct longitudinal and cross section from contour map and extract the cut and fill volumes. Also use computer programs to level piece of land and compute quantities considering designed level is horizontal and with certain slope.										
<b>Topics:</b> <ul style="list-style-type: none"><li>▪ Draw and Print Complete Cadastral Map</li><li>▪ Draw and Print Complete Contour Map</li><li>▪ Earth Work from Digital Contour Map</li><li>▪ Longitudinal and Cross Sections</li></ul>

### Course description :

The course is presented in 2 strands. The first strand is concerned with the fundamentals of highway and pavement engineering. It introduces the design process of roads and intersections, including horizontal and vertical alignment design, cross-sections and earthworks. The second half of this strand deals with pavement design and evaluation. Topics include: pavement composition, pavement materials, asphalt mix design, the pavement thickness design, and defects in Flexible pavements and failures in Rigid pavements. The second strand is presents briefly bridges classification and construction methods.

### Topics :

- History of Road Construction.
- Highway Development in Saudi Arabia.
- Highway Development Programmers at National Level in Saudi Arabia.
- The Highway planning process and principles of route location.
- Factors controlling Highway alignment.
- Engineering surveys for alignment
- Conventional methods and Modern methods (Remote sensing, GIS and GPS techniques)
- Geometric design of Highways.
- Highways drainage.
- Classification, Improvement and Stabilization of soil and Earthworks for Highways.
- Sources description properties and uses of bituminous binders.
- Asphalt mix design.
- Asphalt plants.
- Design and construction of different Pavement layers.
- Design of rigid Pavements.
- Pavement Management.
- Types of defects in Flexible Pavements.
- Types of Pavement, failures in Rigid Pavements.
- Pavement Evaluation.
- Introduction to Bridges including (briefly):    Bridges classification, bridge types and Bridges construction methods.

**Experiments:** if applicable it will support the course topics.

Course description : This course will describe new services which become widely distributed through world today such as Distributed GIS, Web Mapping ,Location Based Services.									
Topics: <ul style="list-style-type: none"><li>Distributed GIS : Concepts , Applications</li><li>Web Mapping : Introduction , Web mapping supporting technologies , Web mapping services , Web mapping applications</li><li>Location Based Services: Introduction , Applications , Architectures</li></ul>									
Experiments: if applicable it will support the course topics.									
References: <ul style="list-style-type: none"><li>Zhong-RenPeng, Ming-Hsiang Tsou (2003) Internet GIS: Distributed Geographic Information Services for the Internet. ISBN: 978-0-471-35923-4.</li><li>Web GIS: Principles and Applications (by: Pinde Fu and Jiulin Sun).</li></ul>

#### Course description :

This advanced course will familiarize students with the various data collection technologies used in the generation of 3D point cloud data, and their associated sources of error. This course is aimed at collectors and users of 3D point cloud data so that informed decisions can be made regarding the appropriateness of the various data collection and processing options, and deliverables, and so that the issues around data management are appreciated.

#### Topics :

- Point Cloud Characteristics
- Point Cloud Acquisition
- Sources of errors
- Pre-processing
- Processing
- Deliverables
- Management
- Applications

**Experiments:** if applicable it will support the course topics.

<b>Course description :</b> This course is designed to offer an overview of the modern Web technologies used for the Web development. The purpose of this course is to give students the basic understanding of how things work in the Web world from the technology point of view as well as to give the basic overview of the different technologies that can be used to develop Web-based Applications.									
<b>Topics:</b> <ul style="list-style-type: none"><li>Basic design and implementation of websites</li><li>Discussion of different navigation and organizational strategies</li><li>Client-side technologies including HTML5, CSS, JavaScript, JSON, and JQuery</li><li>Server-side technologies emphasizing implementations in Php</li><li>XML &amp; Web Services</li><li>Web Design</li><li>Web Security</li></ul>									
<b>Experiments:</b> if applicable it will support the course topics.

<b>Course description :</b> This course is designed in order to provide students with knowledge and skills of Underground Surveying which represent an important surveying activity and which is different from surveying in the sunlight. Students will be able to applying principles, instrumentation, data analysis methods, and visualization products associated with underground surveying. At the end of the course, the students will be able to gain adequate insight into theoretical aspects of underground surveying.										
<b>Topics:</b> <ul style="list-style-type: none"><li>▪ Concepts of Underground Surveying</li><li>▪ Activities of Underground surveying</li><li>▪ Underground Practices: Station</li><li>▪ Uses of the Mine Maps</li><li>▪ Making the Mine Map</li></ul>										
<b>Experiments:</b> if applicable it will support the course topics.

<b>Course description :</b> This course is designed to offer an overview of coordinate reference systems which are based on the definition of a datum, and which links the chosen coordinate system with the real world. Many datums are commonly used for referencing geospatial position. Students in the field of geospatial engineering must possess the knowledge, skills and competence in selecting, implementing and evaluating the transformation of coordinates between geodetic datums.									
<b>Topics:</b>  <ul style="list-style-type: none"><li>Overview of reference systems</li><li>Computations in Cartesian coordinate systems</li><li>Coordinate Transformations</li></ul>

Course Name	Advanced Photogrammetry (Elective Course-2)	Course Code	SSRV4XX						
Prerequisites		Credit Hours CRH	3			CTH		4	
			L	2	P	2	T	0	
CRH: Credit Hours    L: Lecture    P: Practical    T: Tutorial    CTH: Contact Hours									

**Course description :**

This course will allow students carry out photo coordinates measurement and refinement, derive collinearity and coplanarity equations using collinearity and coplanarity conditions, respectively and apply these equations in forming analytical relative orientation, absolute orientation and aerial triangulation models and use of both terrestrial and unmanned aerial photographs to produce geometric survey data. Developing computer programs will be a task for some of these applications.

**Topics:**

- Image coordinates measurements and refinement
- Derivation and linearization of collinearity and coplanarity equations
- Applications of collinearity and coplanarity equations in photogrammetric mathematical models
- Close range or terrestrial photogrammetry
- Radaragrammetry and LIDAR Mapping
- Unmanned Aerial Vehicle Phtogrammetry

**Experiments:** if applicable it will support the course topics.

**Course description :**

The course will give students broad background about various registration systems used worldwide with emphasis on that adopted in KSA, survey laws and legal principles related to transfer and endorsing real estate ownership in KSA using deeds and plans, professional ethics and role of surveyors.

**Topics:**

- Land law, records, tenures, leasehold and conveyancing
- Registration Systems
- Registration of deeds in KSA
- Boundaries and surveyor's role
- Valuation of Land

**Experiments:** if applicable it will support the course topics.

**Course description :**

This course is the first part of applied project. Trainee gets the chance to get knowledge about executable projects within capacity of trainee. In addition, Trainee reviews some maps and reports of already executed projects.

Trainee should select a project in coordination with his supervisor. The selected project should meet some standards such as: allows trainee to apply what he already have of skills and experiences during his study. In addition, Trainee should be able to use available supplies such as computer labs, survey systems and software, modern instruments to collect data, process and adjust data, compute final coordinates and draw maps at required scale.

**Experiments:** If applicable, it will support the course topics.

**References:**

- Instrument manual, program manual, books and material used during training stage.

Lab or Workshop's Name: GIS Laboratory		
No.	Product's Name	Quantity
1.	• ArcGIS Desktop (Software)	For 15 users
2.	• Web GIS (Software)	For 15 users
3	• Data collectors	15

Lab or Workshop's Name: Remote sensing Laboratory		
No.	Product's Name	Quantity
1.	• ERDAS Imagine (Software)	For 15 users
2.	• LPS (Software)	For 15 users

Lab or Workshop's Name: Survey Applications Laboratory		
No.	Product's Name	Quantity
1.	• Software for least square adjustment & adjusting surveying observations	For 15 users
2.	• Mobile & mobile application for Indoor Positioning	15
